

K3

Bruno Branssi 2001

SANCAL

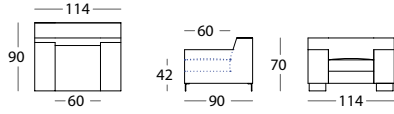

DESCRIPTION

Taking the impetus and strength of climbing as a reference, the K models of Sancal are a compact and dependable project. It has the clean lines of a basic family, suitable for all kinds of environments in any of its versions. The integrated back cushion strengthens the design and gives a relatively deep seating with a compact overall depth. K is a fully modular product that, when combined with different designs for arms and legs, produces three models, each with their own personality: K1, K2 and K3. The K3 model can incorporate an aluminium or regenerated leather arm-tray.

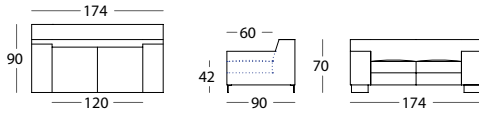

TECHNICAL DATA

Solid wooden structure covered with foam and fibre shell.
The seat and back structures are fitted with NEA webbing.
The inner seat cushion is made with HR Ultracel foam and is covered with thermofused polyester fibre. It has TNT inner cover.
Aluminium feet.
These three versions are suitable for upholstery in fabric, leather or synthetic leather. In fabric, they have fully removable covers, but with leather or synthetic leather, only the cushions have removable covers.
