Clean-cut and open to success.

The requirements for the design of office workstations today are diverse and contradictory: they must facilitate communication and teamwork as well as enable concentrated individual work. Economic rationality demands the efficient use of space and streamlined work processes, however emotional qualities and an atmosphere of well-being are also important if the office-worker is to be productive. In response to this, Sedus has developed a new range for open-plan offices. It comprises tables, storage and

communication components which can be freely combined to form any number of different office layouts. Each element in itself is perfect in terms of ergonomics and functionality. Together, all the elements form an integral concept and incorporate an innovative cabling system which allows for completely free office planning. As such, this new range leaves the office open to endless possibilities – open-plan in the truest sense of the word.

Design: speziell®

Perfect unit for single-minded people: Sedus temptation twin.

The double desk offers double the advantages. On the one hand, more efficiency; as a unit with one shared frame it allows for a wide variety of desk formations. On the other hand, it offers perfect ergonomics, as the frame leaves lots of leg room and the height of each desk can be adjusted separately – a real innovation, even for those working at benches.

Sedus temptation twin promotes communication but, when used in conjunction with the matching desk-mounted screens, also aids concentrated individual work as well. Incidentally, the double desk is also suitable for conventional cubicle offices and can be formally combined with all of the tables in the tried-and-tested Sedus temptation range.

Individual, ergonomic height adjustment.

Since the height of both desktops can be adjusted separately, the range meets high ergonomic standards.

Manual telescopic height adjustment 650 – 850 mm.

Recommended as an inexpensive solution if the desk is not going to be raised or lowered very often.

Simple crank height adjustment 650 – 850 mm.

A couple of revolutions sets the desk to the correct height quickly and easily. This system is ideal when the desk user changes frequently.

Motorized height adjustment 650 – 1250 mm.

This highly convenient form of individual adjustment up to standing height facilitates varied working postures, something which is recommended for healthy office work and for multi-user workstations.

Working environments with quality of life.

Sedus temptation twin allows for the creation of office layouts to suit every need. It provides ideal working conditions in which workers can feel really comfortable. As the Sedus Place 2.5 concept shows, office productivity increases considerably as a result. Sedus stockists offer comprehensive, individual planning consulting.

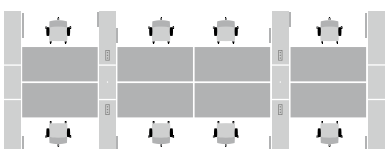

Practical.
Each workplace can be customised; for example, with the PC housing holder.

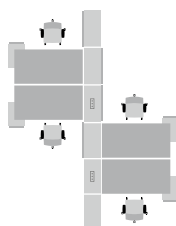

Ready to hand.
The laptop holder is the perfect place to put your portable computer.

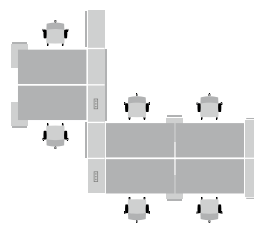

Bench configuration

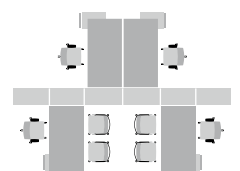

Spine configuration

Bench/Spine combo configuration

Temptation twin/individual desk combo configuration

Success comes to those who grow with the job.

The temptation twin double workstations create clear, linear configurations thanks to their optical design and use of space, and also combine extremely versatile storage space with work surfaces. The desks can be arranged as a bench of any size or in a spine configuration. The unique new wiring concept takes the complication out of wiring all workstations, even in office spaces without a raised floor.

Privacy. Desk-mounted screens provide visual and acoustic privacy, and are optionally available with sound-absorbent filling. Moreover, different heights can be set for each individual desk.

Space-saving. Individual accessories can be mounted on the screen or a function bridge, leaving the desktop free of clutter.

Variable legs. The rectangular legs are available in white or white aluminium. For a clean, more closed look, a panel can be mounted on the legs so that the end looks solid.

Space for fresh ideas.

The “temptation storage” desk-side function modules play a key role in power and data networking. Cables are guided through storage elements level with the channels in the desk frame, which allows any number of workstations to be connected. In addition, they provide a generous amount of room for everything you need right there at your desk.

However, these versatile units offer much, much more; they separate workstations and structure the office space; they provide seating for discussions at the workstation and thus promote communication; they can be covered with cushions or fitted with multifunction rails for organisation boxes and can also be combined with the complete Sedus grand slam storage range.

At the workstation.

The storage modules are equipped with sliding doors or drawers, with shelving also optionally available. The cables always run underneath the top.

Useable on both sides.

As required, modules for use on one side or the other, or on both sides can be installed, so that several workers have access to the contents.

A revolution in office wiring.

Office planning has never been so easy: in any and all rooms, each workstation is connected to the power and data network and has sufficient sockets, without having to include a raised floor or the position of cable ducts or floor boxes in the plan. Thanks to Sedus' brand new concept, this is now possible for the first time ever.

Bridging. Where necessary, the storage modules can simply be bridged. Cables are guided through the bridge elements.

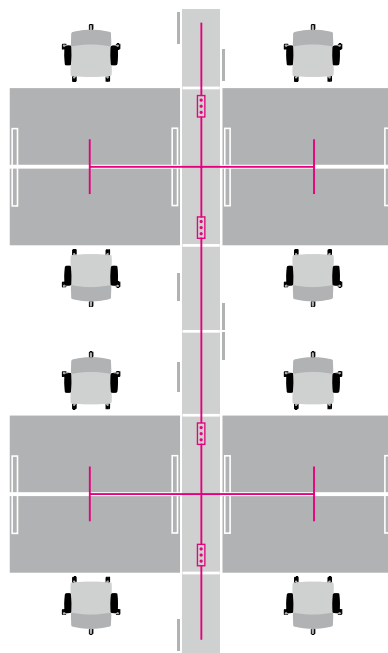

Continuous wiring. Lights can be positioned using adapters: both on the bridge elements and directly between two desks.

An innovative wiring concept that makes sense.

Entirely new scope for space planning and a tidy impression are the main advantages of Sedus' new wiring concept. The tables and storage modules do the job of a raised floor. The cable guidance is invisible and each workstation is supplied with all of the necessary connections, as well as sufficient sockets for chargers, lights and other accessories. Well-designed details make it possible for facility management to wire any conceivable workstation configuration quickly and easily.

Wired up. Wiring several workstations arranged along one axis is no longer a problem thanks to the new Sedus concept: in principle, only one

network connection at one point in the room is now required. This can be a floor box or a wall outlet.

Every workstation well connected.

Key factors in maximizing planning flexibility are intelligent options for both collective wiring and individual wiring of each workstation.

Collective wiring. The Sedus temptation twin double desk units are available with collective wiring, which facilitates cabling over several workstations. The cable guidance runs at leg height though a cable channel that folds on both sides.

Individual wiring. For cable guidance at the individual workstation, there are a number of options to choose from.

Interconnector. When more than one double desk is combined, the cable channels are linked with interconnectors, which keep the cables concealed as they are guided. At the same time, this ensures the correct spacing for desks with motorized height adjustment.

Cable guidance. From the floor to the table the cables are guided via cable vertebrae or leg covers.

Cable dump. The optional cable dump folds down on both sides and is mounted just below the desktop.

Sliding top. A locking mechanism guarantees secure closure and prevents accidental movement of the desktop.

Cable outlets. The cable openings for the individual workstations are on the rear edge of the desk.

Variatons. Choose from elegant outlets with a diameter of 70 mm and a square cover or with a flap in different sizes.

Not a cable in sight.

The wiring level of the temptation storage modules lies directly underneath the top, which push-fits into place, making it easy to open and access at any time. In terms of function and height, the power and data cables in storage units and desks are perfectly coordinated.

Wiring level. For immediate access to the outlets, sockets can be incorporated into the tops plates. Under the raised top plate, there is plenty of storage space available for cables and junction boxes.

Cable outlet. For wall connections or linking more than one module, the cables can be guided through an outlet at the end of the table. The continuous sections mean that cables can exit wherever you wish.

Cable guidance in the storage unit. The cables can be guided internally through the sub-floor to the wiring level. An internal panel covers the cables, while access remains quick and easy.

See the big picture, love the finer details.

Integral thinking is an important principle at Sedus. It's all about developing comprehensive solutions for the highly complex requirements of workstation design in the office. Consequently, care has been taken with the new open-plan office range to ensure that the modules are compatible with many Sedus products and can be combined with other office layouts with ease.

With their diverse table shapes and range of combinations, the Sedus temptation twin double workstations perfectly complement the entire Sedus temptation family in terms of design, dimensions and functionality. Choose from a 4-leg model or temptation four meeting table, the impressive temptation prime with sturdier 4-leg frame or the temptation c with C-frame. Such options enable individual workstations to be incorporated into the overall plan, should these be required for managers or due to lack of space.

Communication island and media genius: temptation high desk.

For a short project presentation, a quick team meeting or a little coffee break – the new temptation high desk marks the arrival of a multifunctional communication element with a wide range of uses. Placed centrally in open-plan offices, it draws workers away from their seats, encourages formal and informal communication, allows for quicker meetings on the go and stimulates ideas. Thus, this versatile module creates both a comfortable and productive

atmosphere for workers. Sedus high desk is also a serviceable addition to consultation and reception areas, and in canteens.

An integrated media panel transforms the high desk into an optimal tool for efficient team and project work. In addition to an LCD screen, the entire range of modern data and media technology can be integrated, to suit the individual needs of the office and the budget.

Multitasker. Ideal for quick meetings, informal get-togethers and much more besides.

With footrest for comfort when used as a standing table or with barstools for varying

working postures. Available in many different finishes.

Integrated socket.

Power, network, video and audio connections are integrated in the desk top (model-specific).

Space for the PC.

A small CPU can be installed underneath the desk top, leaving the surface free.

Communication is a success factor.

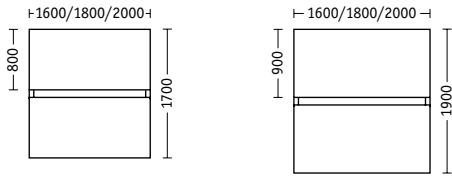

When employees communicate, it can only be good for the company. After all, the innovation-driven global competition of today calls for ideas and solutions to be developed increasingly quickly in ever more complex market conditions. There's no way individual disciplines and departments can meet these demands on their own. What is required is teamwork and knowledge transfer, networking and company-wide cooperation.

Therefore, intensive personal communication in the office should be rigorously pursued in all its facets; by creating the ideal conditions for a quick conversation at the workstation, through versatile meeting areas for a team talk to pleasant and inspiring areas which encourage informal discussions. Sedus offers integral intelligent systems that do just that, including the open-plan range Sedus temptation twin.

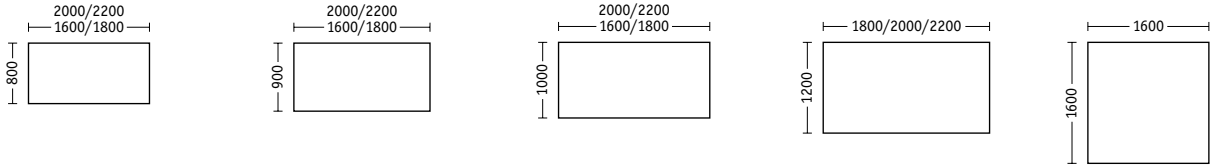

Teamwork. When planned correctly, open-plan offices offer ideal conditions for spontaneous decisions and quick, face-to-face conversations with colleagues.
